## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
2. Claim 24 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claim 24 recites the limitation "said transferred generic object" in line 12. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5. Claims 1-5, 7-21, and 23-25 is rejected under 35 U.S.C. 102(a) as being anticipated by James ("James", Netscape Navigator 3.0).

Regarding claims 1, 14, 19, 24, and 25, James teaches a method of transferring data across a computer network which comprise setting data transfer constraints (Auto Load Images, Figure 8-15), requesting transfer of data (including image and sound data (page 357) stored on a remote computer system (inherent, page 360), storing a plurality of generic objects (placeholders), each stored generic object corresponding to an

original object in data requested (placeholder for each image), identifying at least one object (image) included in said requested data as being associated with a generic object (placeholder, Fig. 8-16) and substituting the generic object for each of said at least one object (page 361, line 3) responsive to said data transfer constraints (page 359, last paragraph), outputting said requested data including said generic objects (Fig. 8-16) or corresponding original objects (page 361, Fig. 8-16)

Regarding claim 17, James teaches a method of compressing digital images, comprising the steps of identifying name, position, and characteristics of objects in a digital image and identifying names of identified objects (download a picture, page 352), replacing identified objects with generic objects (document templates), position data and characteristics to form a modified digital image (replace images with placeholders, Fig. 8-16) and displaying the modified image (page 359, last paragraph).

Regarding claim 18, James teaches a method for restoring a compressed image comprising the identifying generic objects (placeholder icons) in received image data; identifying corresponding objects (image) in subsequently received data (Fig. 8-16, page 359, last paragraph); replacing said identified generic objects in said received image data with said corresponding objects to form an image and displaying said image (page 361, line 3).

Regarding claim 2, James teaches said stored data includes image and sound data (page 337).

Regarding claim 3, James teaches the displaying said web browser image (page 360).

Regarding claim 4, James teaches that the remote computer system identifies generic objects (inherent).

Regarding claims 5, 13, and 21, James teaches that while the web browser image is being displayed, the remote computer system is transferring generic object codes associated with related images (page 359, last paragraph).

Regarding claim 15, James teaches that the outputting means is a video display (page 337).

Regarding claim 16, James teaches that the interface device is a speaker (page 337).

Regarding claim 20, James teaches a database with a plurality of generic objects (placeholder).

Regarding claims 7 and 23, James teaches the transferring requested object while a corresponding generic object is being displayed and when said requested object is received, replacing and displaying each corresponding generic object with each said requested object (page 359-361).

Regarding claims 8-12, James teaches specific types of constraints (page 359-361)

6. Applicant's arguments filed 11-12/02 have been considered but are moot in view of the new ground(s) of rejection.
